Dear Federal Communications Commission,

Dear FCC, Betty, Amy, and Norm:

I agree with the thrust of this argument.
Make the field level and make it accessible to all consumers.
Government's best role is to make sure that all parties
communicate and have common standards so that the public
benefits.

The iPhone has set the stage for the future of mobile Internet
-- but bad policies allow companies like AT&T and Verizon to
shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the
700MHz spectrum auction to create an open network that gives
consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive
wholesale marketplace.
3. The freedom to access any content or services we want through
our devices.

Sincerely,

Gene Olson

This is undoubtedly good for consumers, and there are companies like google willing to bid in this scenario...

1. Open applications: Consumers should be able to download and utilize any software applications, content, or services they desire;
2. Open devices: Consumers should be able to utilize a handheld communications device with whatever wireless network they prefer;
3. Open services: Third parties (resellers) should be able to acquire wireless services from a 700 MHz licensee on a wholesale basis, based on reasonably nondiscriminatory commercial terms; and
4. Open networks: Third parties (like internet service providers) should be able to interconnect at any technically feasible point in a 700 MHz licensee's wireless network.

Dear Federal Communications Commission,

For too long have large corporations tried to limit the advancement of technology in society. The concept of having proprietary software, phones that can only be used with a single provider is counter progressive. As a society how can we progress technologically when large corporations deliberately limit what the consumer can have based on their profit margins. I think it's time for a change in this industry. I believe it's only fair to the consumer, to be given the option of using whatever phone they would like, whatever software they want or need, and for the love of God, who actually thinks that paying by the minute is a good/fair business model? I firmly believe that this is our right, it's the only right we have when all others are taken away, what right you ask? The right to choose. Something that corporations controlling this proprietary hardware/software would absolutely love to take away from us.

Sincerely,

Ryan Cossette

Please reject efforts by the most liberal factions of the Democratic Party to diminish the value of the spectrum in order to advance a narrow, politically driven agenda that rewards the few while punishing the American taxpayers regarding the regulation and growth of the wireless industry.

This auction **MUST** be conducted in a pro-taxpayer, pro-consumer, pro-market and pro-competitive manner without interference or encumbrances from political (democrats) influence for their own benefit. This movement is for the establishment of what seems to me to be a socialist government. Please feel free to not support this view or the views of a socialist controlled congress.

dbrown6256@wowway.com wrote on 7/23/2007 6:12:55 PM :

Dear Commissioner Martin,

I am one of more than 230 million Americans who use wireless services every day to stay in touch with friends and family, to be more productive at work, to call for help in emergencies, and to be accessible when I want to be. Wireless users like me can enjoy those benefits and more, because wireless service is so affordable and so accessible.

Unfortunately, inconsistent laws and regulations are proliferating in states and cities across the country. This threatens to drive up wireless prices, limit the number of provider choices for consumers, and slow the introduction of new products and services into the market. Especially for families, small businesses, seniors and others on fixed incomes, the cost and confusion of increased state laws and regulations could ultimately put wireless services out of reach.

You can ensure that wireless consumers like me will benefit from one fair, consistent national policy for wireless services, with your support for meaningful telecommunications reform legislation in the 110th Congress. By supporting the Cell Phone Tax Freedom Act of 2007, you can relieve American wireless consumers of an unfair tax burden by placing a 3-year freeze on new, discriminatory state and local wireless taxes.

Wireless service is something I use every day, and I like choosing the plans and features that are the best fit for me and for my family. So in 2007, I ask you to please stand up for more than 230 million Americans, and make it your priority to support communications reform in the 110th Congress. Enact one fair, consistent national wireless policy, and support the Cell Phone Tax Freedom Act of 2007, and place a 3-year tax freeze on new, discriminatory state and local wireless taxes.

As a policymaker in Washington, you can relieve wireless consumers across the country of the cost and confusion of conflicting state laws and regulations. Thank you for your leadership on this issue. I appreciate your support for this critical issue in the 110th Congress.

Sincerely,

Donald Brown

Robert Olson (undotcom@sbcglobal.net) writes:

Please consider Google's approach to releasing the 700 MHz spectrum. You would be opening a new age of economic expansion by creating a wireless internet platform open to all manufacturers and service suppliers. I am an avid fan of capitalism and applaud your use of the "auction" system. Please take the next step to creating a platform that would open the spectrum to thousands of companies and entrepreneurs. Do not let ATT and other firms bluff you into their "lowered auction revenues" argument. By opening the spectrum to millions of users, you could launch a registration system similar to Network Solutions to generate annual fees for the FCC. Just look at their annual revenue growth!

sincerely,
Robert Olson

moholstein@hotmail.com wrote on 7/23/2007 7:44:42 PM :

Mr, Martin,

I was surprised to find your email address publicly available on the FCC's website .. it's a rare sight indeed in today's society to find a way to directly communicate with our government officials.

It's an odd concept that anyone can "own" an abstract thing like the particular rate at which energy resonates (eg: "spectrum"), but I nonetheless respect that government regulation is required to maintain order in such things, much the same way I'm forced to stop at an intersection because of a sign, but despite the absence of traffic.

To that end, I respectfully request you see that the "spectrum" which, ever since the likes of Tesla and Marconi, have buzzed about our heads and houses, be made available in a way which best benefits the people served by it.

You, as our government, are charged with ensuring that resources are allocated in a manner best fitting the interest of the populus .. while I do not support the position of a particular business interest in the upcoming auction, I do think that you, as our government, is in a unique position to permit industry to compete -- by forcing licensees of this new 700mhz spectrum to allow *any* device, and *any* application -- not the "crippleware" that I can get on my phone, but anything I (or anyone else) can develop and deliver.

This "700mhz" band belongs to the people .. we live under it, much like we live under the guidance of the Government of the United States. Please see that it serves the People of the United States, and not the various business interests seek to protect their private interests.

You serve a noble role as a public servant, and we trust you with our future.

Sincerely,

Michael Holstein

Federal Communications Commission
Office of the Secretary

vincent d mcbride (mcbride22@cox.net) writes:

The 700MHz auction should be sold in CMA markets so all small business can bid for the licenses including the 22mhz set aside for open access in the upper band. The 700 mhz. auction rules should be set for all small business and not just Google or AT&T.
